Member News

From the President

me of how much the Guild means to me. I received a request to pick up a donation from a former member who is moving out of state. He donated several hundred board feet of beautiful walnut, birds eye, curly, tiger striped, and guilted maple, lace wood and other types of wood. He also donated some tools. The most important thing was that even though I had never met the man before I felt an immediate friendship with him. I am elated to see bonding through woodworking that I don't see in many other hobbies.

Some of the tools that were donated were some outstanding Japanese style planes. These will be placed where they can be used so that everyone can have a chance to use them. The ability to use tools that we don't have at home, and to see if we

have seen several things this week that remind like them before we buy them, is one of the really great benefits of membership.

> I stepped into the Cal Hobbs' Hall Table Class that started this week to find two pairs of father-son teams working together. I have frequently seen a number of other family groups working together at the Guild, and it always makes me happy to think of the memories that are being created for these fami-

> As I see these things happen and the Guild continues to grow, I know that I'm seeing an exciting

future for the Guild and for woodworking in our commu-

A Busy June Weekend

weekend. There are two events, the Maker Faire 2017, and the Wood Turners 31st Annual Symposium being held here in Kansas City. The Guild would like to display some of your works at both events - so if you have something you'd like displayed, please contact me, and I will arrange getting it from the Guild to the display and back.

We still need volunteers at both events, so please consider giving a few hours to help expose the Guild and our craft to the community! Guild shares are available for your time.

The truck build for the Maker Faire is complete. With the help of 19 people - We completed building parts for over 1000 trucks!! They are boxed up and ready for the big day! Many thanks to those that came out to help and those that offered to help - I simply could not have done it without your help! And

une 24th and 25th is gearing up to be a busy a special thanks to Dave Kraatz, as he took 'my order' and turned around with the calculations and product to build those trucks. Over 400 board feet of poplar, 48 bottles of glue, 4000 wheels, and nearly 4000 feet of wooden dowels... We are ready to give the kids a toy truck to assemble and hopefully something memorable for the future!

> Lastly, if you have an idea, or think you can help coordinate part of an event, I'd be glad have your help! Many hands make light work, and I want to provide Our Guild with great quality events!

-Alex Scott, Events Director

From the Shop

hese are troubling times. We have noticed several tools that have $\,$ lar from having to carry in their own tool kits. disappeared from the shop recently. A couple of hand planes and spare irons are not where they should be. Several of the bar clamps have also migrated away. I want to be optimistic that perhaps these tools were misplaced or got mixed up with members' tools and got carried home by mistake. Perhaps a good intentioned borrowing that got forgotten. I so much want to believe in these innocent explanations and not have to face the idea that someone, a member no less, would have stolen tools from our shop. Our shop is dependent upon trust and faith that our members will use and care for our tools as they would their own and in so doing allow our shop to continue to grow and improve. Our shop is well equipped with high quality tools and facilities, open a generous number of hours a week and all for paltry yearly fees.

If we cannot operate in an honest, trusting environment we must change how our shop operates. One option is to remove all tooling that can be easily stolen, leaving basically the stationary machinery. Our shop would be much more austere though our members would be more muscu-

Our other option would be to go to a tool crib format where all hand tools and supplies would have to be signed out and in as you would use them. This would require taking away shop space to create the locked tool room and necessitate the hiring of tool room clerks (no one wants to sit in a box all day for free). Say good bye cheap shop access along with limiting shop hours.

I would ask everyone to check their cars and tool bags and aprons to make sure you didn't accidentally carry one of our tools home. And when you're in the shop keep an eye on our tools. The bad guys aren't all wearing black hats with bandanas covering their scarred faces anymore.

I wish I had better news

-Chuck Saunders, Assets Director

Intarsia: the Wood, the Craft, and the Creativity

Plus member of the Guild and has been an instructor for several classes. He began to develop his woodworking skills about 20 years ago after attending a Woodworker Show in Kansas City. His specialties include the scroll saw and marquetry as well as intarsia. David is a recognized master craftsman whom we are pleased to have as a Guild member.

Intarsia classes have been coming along at the Guild at a regular pace for the past couple of years and is having a popular revival as a part of the woodworker's craft. Intersia is a woodworking technique that uses varied shapes, sizes, and species of wood fitted together to create a mosaic-like picture with an illusion of depth. Intersia is

he June 21st Guild program will be present- created through the selection of different types ed by David Roth. David is a Woodworker of wood, using their natural grain pattern and color (but can involve the use of stains and dyes) to create variations in the pattern.

> During this program, David will provide a demonstration on how to sculpt intersia pieces, and discuss the best types of wood for the intersia process.

-Matt Nowak, Programming Director

The Basic Woodworking Class is in High Demand

he Basic Woodworking Class is one of our primary training offerings at the Guild. The class is usually fully enrolled well ahead of time with a waiting list for open spots. The current class schedule of four classes for 2017 has been sold out since early spring.

I have had several inquiries about what do we do in the class and why is it so popular.

The class is advertised as an introduction to woodworking for the aspiring woodworker with little (possibly high school woodshop 30 years ago) or no prior woodworking experience.

The class is designed to provide an introductory experience with the primary machines in the shop and the process of preparing, sizing and iointing wood to make a project.

Our beginning project, a small cutting board of maple or beech, is used to teach the process of material preparation. Starting from rough stock, the students are taught how to use the jointer. planer and table saw to get wood straight, planed to the proper dimension and sized to the correct width. The next step is gluing to get the pieces integrated properly for shaping. At this point, the board is shaped using the band saw and router table. This initially comes across as a rather mundane project, except that we have used five if the basic tools in the shop. We have made a very useful item and most of our students make several more. This exercise is the same as making a table top, cabinet side or a shelf. Only the dimensions change.

The second project is making a small presentation box with a lid. This is the same type of box produced in the rough to ready class with additional opportunity to embellish and customize the box. Most of our students go on to make several of this type of box because they make good gifts and are a good reinforcement exercise on precision cutting duplicate parts.

The final project of the class is an Arts and Crafts style plant stand. This project is an immersion in the process of making mortise and tenon joints, there are 32 of them. There is a top which is the cutting board exercise all over again. Tenons are cut using the dado saw or router. There is a cross lap stretcher which is found in many Craftsman style projects. There is an intensive exercise on measuring marking and layout of projects.

The final class meeting is a thorough introduction to the finishing process. This is a part of woodworking that many of us neglect, but is very important if we want a first class product.

This class graduates up to 48 new woodworkers each year that are prepared to use our shop and enjoy the craft of woodworking.

-David Kraatz, Training Director

Safety is Great People

ot only do we have a very active and effective Safety Committee, which operates very well as a team, but we also have a cast of leaders who have stepped up individually to the challenges of making Safety seem like it just happens naturally in a hobbyist woodworking organization like ours. The truth is that is doesn't happen at -John Sloss, Safety Director all, unless great people give of themselves by volunteering their skills (oftentimes behind the scenes) to perform tasks that are essential to ensuring Safety is never compromised in the interest of any other goal.
