

Obtaining your FREE copy of VCarve Pro

Now let's get down to the nitty-gritty; the first thing you need to do is download your own client copy of VCarve Pro Makerspace Edition on your own computer. This will be a fully functional version of the software with the exception that you will not be able to generate the G-Code used to run the CNC. You will generate the G-Code when you bring your design to the Guild and upload your file into the Master Makerspace Edition of VCarve Pro.

You can obtain a link to download your Client Copy of VCarve Pro that is configured for the Guilds Makerspace by sending an email request to CNCSIG@KCWG.net asking the administrator to send you the link from Vectric. You will receive a return *email invitation* from Vectric to join the Guild Makerspace.

You must follow the directions in "Instructions for configuring your free VCarve Pro Software" for the software to mesh seamlessly with the Guilds Master copy of VCarve Pro Makerspace.
